

All material data – in just one app: **HOMAG's materialManager creates transparency.**

Material diversity means data diversity. Both are on the increase and require solutions for greater efficiency and transparency, such as HOMAG's materialManager. Using this app, you can centralize all your panel material data in one location. Always available. Simple, mobile access – via tapio.

Your benefits at a glance

Virtual materials hub

materialManager basic allows you to manage up to 100 different panel materials in one app. Together with all the data and processing information required for the production process. Outlook: other materials will soon be added, for example, your edging materials. The aim is to enable you to manage all your materials in this one app in future.

Order and transparency

The data stored in materialManager is clearly structured and well organized. That promotes transparency.

On the web or via app

materialManager can be used on any end device with internet access. On the go via app on tablets with Android operating system, and via web browser on a desktop computer.

Open for all materials

materialManager can record and manage all panel materials – regardless of the manufacturer. All you have to do is enter the material data from the manufacturer's catalog or scan* the material code on the packaging or label. You then add a unique material name. Done!

Automatic data copying

In future it will be possible to copy the material data stored in materialManager quickly and directly to the desired application, for example, Cut Rite, intelliDivide or CADmatic.

* Possible for materials from tapio partners who have stored their material data.

Record, manage and retrieve data. All with a single app.

Selecting material from stock

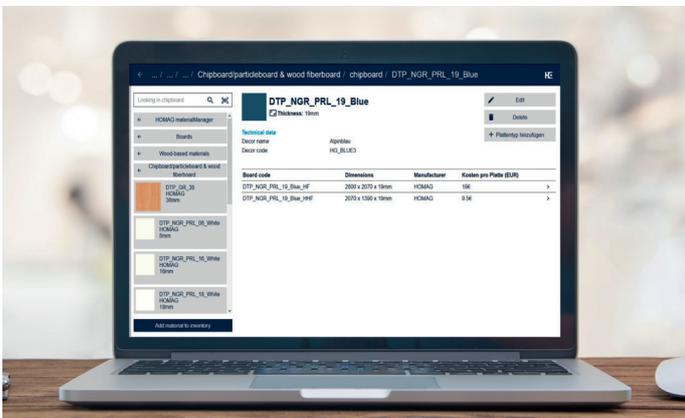

materialManager shows you all the panel materials stored for your company in a clear overview. Once you have found the material you are looking for, you can select it simply by tapping on it.

Adding new material

You can record new material comfortably by entering the data via keyboard on a computer with the web app. Simply enter all the required data once. Done. Alternatively, you can scan* the material code on the packaging or label and load the data directly from tapio.

* Possible for materials from tapio partners who have stored their material data.

Retrieving detailed material data

In the details view, you can see all the information, such as type of material, length, width, thickness and finish, at a glance. For accurate material selection.

Copying data

You can copy the data set for the selected material from materialManager directly to the desired HOMAG application. No matter whether CADmatic, Cut Rite or IntelliDivide, the data is compatible with the digital HOMAG applications named. More to follow shortly.
